TECHNOLOGIES FOR PRODUCTION AND STORAGE OF FEED, GRAIN
TECHNOLOGIES FOR PRODUCTION AND STORAGE OF FEED, GRAIN

The requirements for livestock farms and optimal conditions have fundamentally changed. Without new technologies and approaches you cannot guarantee the high efficiency of farms. Therefore, the company BAUER TECHNICS uses the latest scientific knowledge and farmers experience from around the world. Modern farm livestock breeding is complex of top technologies. In order to function as a balanced unit, it is necessary to have not only the appropriate technology, but especially the experience and a team of top-class specialists - architects, builders, livestock specialists, feed specialists, feeding and genetic specialists, electrical engineers and others.

BAUER TECHNICS meets above requirements and thanks to this has successfully implemented a number of projects such as reconstruction of farms and stables, as well as the construction of new „greenfield site“ farms not only in the Czech Republic but also abroad. Regarding the high level and efficiency of a farm is very often decided by solutions of the smallest detail. BAUER TECHNICS therefore respects proactive approach to their investors and their teams of experts, such as livestock specialists, feeding and genetic specialists, agronomists. Their detailed knowledge of local conditions contributes to the creation of a more comprehensive and accurate designs of farms and stables.

The professional approach of BAUER TECHNICS always guarantees the satisfaction of our clients. An essential part of high-production animal farms is also storage of feed and grain.

BAUER TECHNICS SUPPLIES A COMPLETE RANGE OF EQUIPMENT FOR:

- Feed production
- Storage of grain and components
- Large-capacity grain or wet corn storages as the ideal tool to increase the effectivity of production on animal farms

FLEXIBLE AND MODULAR SYSTEMS

BAUER TECHNICS systems are very flexible, modular system allows installation of new technology in new farms and in farm reconstructions. Storage silos are made of galvanized steel sheets with a smooth surface inside, which prevents the settling of stored material. Of course, bulk storage silos and feed silos have an aerating systems, which are controlled by a main computer based on temperature and humidity and the moisture level of the stored material, or humidity of the external environment.
FEEDMILLS

BAUER TECHNICS supplies feedmills specially designed for individual situations to meet the needs and operation of the farm, including steel buildings, outer sheathing and silos for the storage of grain and final products.

It also supplies individual components - grinders, mixers, steam generators, conditioners, pelletizing lines, extrusion lines, cooling column, spray equipment, conveyors, weighing systems, bagging lines etc. Design proposal for feed mills is drawn from clients specific needs for production of feed for the type of animals with respect to their genetic potential.

BASIC CHARACTERISTICS:

- Capacity from 1 ton / hour feed mixtures to industrial line with the performance of 60 t/h or more
- Production of bulk and granulated mixtures
- Fully automated production system with minimum staff
- Separated batch process manufacturing
- Use of purchased premixes or installing micro-lines
- Provision of all hygiene requirements
- Precision weighing dosing of all raw materials and components
- High-quality components homogenization
- Steel silos with a capacity of 20.000 t

Capacity and the number of silos are always consulted and adjusted according to the client's requirements with respect to the capacity of the feedmill, raw material basis, the number and composition of the recipes, the type of storage, dispatch of finished mixtures etc.

When designing complex feed mixing lines, BAUER TECHNICS utilizes years of experience in this field. We are cooperating with the world’s leading experts in the field of production of feed and grain storage.
BAUER TECHNICS

BAUER TECHNICS was established in 1992, initially as a sales and service group for Bauer GmbH Voitsberg. Over the years, the company focused primarily on the realisation of turn-key farm projects and has become the leader in this field on the world market. For successful development of the company we use the latest technologies in this field and we have a team of experienced and professional experts in various fields of the industry that are required for successful realisation of projects.

BAUER TECHNICS is mainly focused on large agricultural and food industry projects. They are implemented throughout the world, especially in Russia, Ukraine, Belarus, Kazakhstan, Algeria and Slovakia etc. Our domestic market in the Czech Republic we do mostly projects of a smaller scale.

Comprehensive supply of capital equipment, including buildings and technologies for agriculture and food processing, complete farms for breeding and fattening, meat and milk processing, storage of agricultural products, but also in the field of ecology such as storage and processing of slurry, including biogas stations.

MAIN REALISATIONS

- ZD Maleč (Czech Republic) – farm for 600 cows
- DS AGROS Netín (Czech Republic) – farm for 450 cows, incl. reconstruction
- ZDV Krchleby (Czech Republic) – farm for 480 cows, incl. reconstruction
- Nový svět (Russia) – farm for 5,800 sows
- Voschod Kaliningrad (Russia) – farm for 24,000 pigs
- DAN Moravia Agrar (Czech Republic) – farm 1,8 Million fattening of chickens (Danish investor)
- Energotransinvest Kiev in Bolgrad (Ukraine) – farm for 1,500 sows
- Stiomi (Ukraine) – grain storage for 160,000 t of grain
- Maksimovka in Obninsk (Russia) – pig farm for 600 sows
- Borisov farm 1 (Belarus) farm for 24,000 pigs
- Borisov farm 2 (Belarus) farm for 24,000 pigs – in implementation
- Zalevskoe Moloko (Russia) – farm for 1,200 dairy cows
- Astarta Kiev (Ukraine) – farm for 1,200 dairy cows
- DAN SK Agrar (Slovakia) – farm for 6,000 sows (Danish investor - now the completion of the farm for 9,000 sows)
- DAN SK Agrar (Slovakia) – Velké Kosihy – 24 halls for fattening pigs (Danish investor)
- Proovo (Slovakia) – completion of the farm for 4,800 sows (Danish investor)
- Rosagroregion (Russia) – Agrohotel in Anapa
